Overview

This website is for people who loves music and love to share their taste in music. In this website you can make your own playlist and share it with other people, or you can just make playlist just to organize song lists. This website also allows you to play song.

Goal of the project

To provide user a bug free and user-friendly application.

Strategy

For this project we have chosen to work with an agile approach. We will continuously keep delivering small features, instead of delivering the final product at once. This way we can work more flexibly and give a different level of priority to different features and respond quickly to requests made by our client.

Phrases

For this project we work with an agile approach. We work in sprints of 3 weeks; this means that every phase consists of 3 weeks. The first phase of our project is dedicated to research. We will start by writing the necessary documentation, like the project plan and the backlog. We will also write user stories and try to plan for the next sprint. At the end of this phase, we will deliver our documentation and implement the feedback we will get.

Risk and mitigation

Risk	Prevention activities	Mitigation activities
1 The product owner becomes unavailable	There should be at least two product owners, in case one of them becomes unavailable.	
2 Laptop crashes and all data is lost	Always make multiple backups on different hard drives/in the cloud	
3 Code crashed after implementing new feature or changing a feature	Frequently push new features to git	Revert to the previous stable version

User Stories

1. Add song.

Estimated time: 2 days

Priority: 100

User Story:

As an Admin

I can add songs

So that there are songs on the website.

Acceptance Criteria:

- I can see option to enter song name.
