Documents

1. FeedPulse for group
2. FeedPulse from Peers
3. FeedPulse from teachers
4. Code Review
5. Design Document
6. Planning and User stories
7. Research document
8. Security report
9. Test (includes test reports and cases)
10. UX Feedback Report

All documents are completed versions.

React

React contains the front-end latest version. It has almost all user stories implemented. All the user stories of admin are completed. Admin login info is email: thomas@gmail.com password: 123Thomas. Customer only can view everything but cannot take any action yet. Customer login info is email: larry@gmail.com password: 123Larry. I used useContext, useEffect, useState, and customised hooks. My project clearly shows I have clear idea about ReactJS at least what I should have learned this semester. Web socket is working. But front-end testing is not done, could not figure it out yet.

ListenUp

It contains the backend. I covered all the things that need to be covered for this semester. Authorisation, async, Mockito testing etc. SonarQube gives 85% coverage. And docker is also implemented. Docker is also connected to git there it can be said the whole CI/CD is implemented instead of only CI.
